Summary

Olania, a newly democratic country with a population of 15 million, is facing a critical test. Led by the powerful member of parliament Barreth Boggs, a group of anti-democratic political figures have in recent months begun a push to curtail Olanians' voting rights. In response to this growing effort, civil society activists have come together to successfully push for a nationwide voting rights referendum. To be held in six months' time, the referendum will provide Olanians with an opportunity to re-affirm and protect voting rights, requiring at least 65% of support in order to succeed. Olanians for Democracy (OFD), an established civil society organization that works to

protect Olanian democracy, is working closely with a grassroots network of citizen volunteers to build public support for the voting rights referendum. However, their effort faces significant opposition from Boggs and his anti-democratic allies who are expected to use everything at their disposal to defeat it.

Who am I?

You are a member of civil society working to get your fellow Olanians to vote yes in the upcoming referendum. You are either on staff at Olanians for Democracy (OFD), a well-established CSO led by its executive director with a headquarters office in the capital city of Praka, or a part of a grassroots network of volunteers. This Grassroots Network (GN), led by urban and rural outreach coordinators, operates mainly out of an office in the village of Vario and is working together with Olanians for Democracy to support the referendum.

Urban Coordinator

Rural Coordinator

Volunteers

What am I doing?

As a part of either Olanians for Democracy or the Grassroots Network, you will be working over the next six months (simulated over 60 minutes) to inspire Olanians to care about protecting democracy and their voting rights so that they will vote yes in the upcoming referendum. As you do this, you will need to navigate potential external challenges that threaten to derail your operations and convince citizens to either not vote or to vote against the referendum. Currently polling at 60% public support, the referendum, per Olania's constitution, must garner at least 65% support to succeed. During this session, you have an opportunity to gain ground in support based upon actions that you take, and lose ground based upon your preparation and response, or lack thereof, to events that occur.

Technical Systems

OFD and the GN have some important technical systems that you will need to use in the lead up to the referendum. These systems - and their status - will be displayed on the wall during the course of the simulation.

Contact Management System

- Online system managed by the IT team at OFD
- OFD staff are granted varying levels of access to the system, which is used to manage information about supporters and donors

OFD Website

- Managed by the IT team at OFD
- Publishes information about democracy and voting rights, publicizes OFD and GN activities, and collects donations

OFD and GN Facebook Pages

- Two distinct pages - one for OFD administered by the Communications Team, and the other for the GN administered by various volunteers
- Highlights each group's accomplishments and used for citizen engagement

WhatsApp Groups

- All OFD and GN members are included in a WhatsApp group for comms
- The OFD Communications Team and both GN coordinators also maintain WhatsApp Broadcast Channels to reach supporters

OFD Email and File Sharing System

- Most staff use official @ofd.org email accounts, but the Executive Director often uses their personal gmail account, and GN volunteers are not provided official email addresses

Computers

- All OFD staff are provided an organization-issued computer
- GN coordinators and volunteers bring their own computers, upon which they store local versions of supporter and donor contact information

Mobile Phones

- All OFD and GN members bring their own mobile devices (a mix of Androids and iPhones) which they use for work and volunteer purposes

Phases of the Simulation

Phase 1 - Preparation

Prior to the start of the session, you'll have 10 minutes to work across the Olanians for Democracy and Grassroots Network teams to allocate a budget to best secure technical systems. Given the financial challenges of civil society groups, your budget is slim. You may not be able to purchase everything that you want - so choose wisely! You will be able to raise some additional funds during the session if you wish to purchase or implement other items in the budget (see below for more information).

Phase 2 - The Advocacy Campaign

During the months leading up to the election, you can do the following:

RESPOND TO EVENTS

Respond to events that occur during the session to protect the referendum's level of public support

- Remember: You can lose ground if vulnerabilities in your structure, systems and approaches are exploited
- Please use the "Response to Event" Form for any event responses

TAKE ACTIONS

Take actions specific to your role to increase public support for the referendum and/or raise funds

- Please examine the actions available to you and the requirements for taking those actions on your Role Card
- Please use your role-specific Action Forms for these actions

PURCHASE ITEMS

Purchase additional technical systems or policies from the budget (if funds exist)

- These actions must be initiated by the IT Team

Important: your responses, actions and purchases **will not count unless they are written down** in detail on the relevant Action or "Response to Event" Form, **handed in** to the facilitator at the relevant table, and **meet the requirements** for the given action (see Role Cards and Action Forms for details). If your team does not indicate a response to an event, the facilitators will assume that you have not taken any measures to appropriately respond if necessary. The only security policies or best practices that your team should assume are in place are those that you have purchased from the budget. Please also ensure the relevant facilitator is present and paying attention when you hand in a form to either the Events or Actions table.

Phase 3 - Post-Referendum Review

After reaching the referendum - win or lose - you will walk through the story of the wide range of different hacks, attacks, and tech problems that Olanians for Democracy and your Grassroots Network of activists faced, and what the team did well or could have done differently.
